Why IV Therapy?

Clinician-led IV nutrient therapy at HMI

Fatigue that sleep doesn't fix. A rough week ahead — or behind. Training your body can't keep up with. Oral supplements pass through a digestive system that absorbs only a fraction of what you swallow; intravenous delivery places vitamins, minerals, and amino acids straight into circulation, at concentrations the gut cannot reach.

Six focused infusions — each formulated, reviewed, and administered by HMI's clinical team, and matched to you rather than picked off a wall.

What Makes *HMI* Different?

Clinician-formulated, not menu-ordered.

Your infusion is selected against your labs, symptoms, and goals — and adjusted as they change.

Pharmaceutical-grade compounding.

Prepared by an FDA-registered 503B outsourcing facility and 503A pharmacy.

Integrated with your full protocol.

Infusions work alongside your hormone, peptide, and metabolic care — never in isolation.

One clinician, every visit.

Questions answered by your care team, not a call centre.

The *Infusion Club*

Essential one Tier 1 infusion monthly · 15% off extras **\$149/mo**

Signature one infusion monthly, any tier · 20% off extras **\$219/mo**

Elite two infusions any tier — or NAD+ plus a Tier 1 · 25% off **\$429/mo**

Membership unlocks the club price on every infusion, plus priority scheduling; Elite extends club pricing to your household. No contract — cancel anytime.

Inside Every Infusion

What's in the bag, and why it's there

Revive *Hydration & Hangover · Tier 1*

IN THE BAG Ondansetron (anti-nausea, Rx) · Olympia Vita-Complex (B1, B2, B3, B5, B6) · Olympia Mineral Blend · 1,000 mL normal saline

The fast reset for dehydration, travel fatigue, and the morning after.

Prescription anti-nausea medication settles the stomach while a full liter of fluids and B vitamins restore what was depleted first.

Restore *Pain & Muscle Recovery · Tier 2*

IN THE BAG Calcium chloride · magnesium chloride · hydroxocobalamin (B12) · Vita-Complex · optional ketorolac (anti-inflammatory, Rx)

For aching muscles, tension, and the physical toll of chronic strain.

Calcium and magnesium are the minerals of muscle contraction and release; a prescription anti-inflammatory may be added at your provider's discretion.

Reset *Weight & Metabolic Support · Tier 2*

IN THE BAG Taurine · methylcobalamin (B12) · Vita-Complex

Built to complement a medically supervised weight programme. Supports fat metabolism and energy production — and covers the B-vitamin demands that rise on an active plan or GLP-1 protocol.

Recover *Immune Boost · Tier 2*

IN THE BAG Preserved ascorbic acid 500 mg/mL · zinc sulfate · Vita-Complex

For the first hint of a rough week — or the week before travel, surgery, or a season of long days. High-dose vitamin C and zinc, the two nutrients most studied for immune defense, at levels oral dosing cannot reach.

Renew *Inner Beauty · Tier 3*

IN THE BAG Preserved ascorbic acid 500 mg/mL · biotin · Vita-Complex

Beauty from the inside out. High-dose vitamin C is a required cofactor for collagen formation; biotin supports the keratin structures behind strong hair and nails.

Reignite *Circulation & Libido · Tier 3*

IN THE BAG Arginine 100 mg/mL · niacinamide (B3) · pyridoxine (B6) · taurine

An arginine-forward formulation. Arginine is the body's precursor to nitric oxide — the molecule that relaxes and opens blood vessels — supporting healthy circulation, performance, and vitality.

Recharge *NAD+ 250 mg · Advanced · ~2 Hours*

IN THE BAG NAD+ 250 mg in 500 mL normal saline, infused slowly for comfort · 500 mg \$550 · 750 mg \$675 · 1,000 mg \$795 · series of four \$1,399

NAD+ is the coenzyme every cell uses to turn fuel into energy — and levels decline steadily with age. A two-hour infusion supporting cellular energy, mental clarity, and healthy aging.

THE BUILDING BLOCKS — RECURRING COMPONENTS EXPLAINED

Olympia Vita-Complex: thiamine B1 · riboflavin B2 · niacinamide B3 · dexpantenol B5 · pyridoxine B6 — the full energy-metabolism family. **Mineral Blend:** magnesium · zinc · manganese · copper — hydration, immunity, and muscle function. All infusions are built in 500–1,000 mL of normal saline and compounded by Olympia Pharmacy, an FDA-registered 503B outsourcing facility.

Formulations shown are standard preparations; your clinician may adjust doses and components to your labs, medications, and goals. Items marked Rx require a provider order following a good-faith examination. These statements have not been evaluated by the FDA; these services are not intended to diagnose, treat, cure, or prevent any disease.
